

Anthony Cavallo is the Acting Director of GSA's Robotic Process Automation Program. He has been with GSA for more than 18 years and has been developing RPA bots since 2018, when GSA launched its RPA program. No stranger to automation, he has been automating processes throughout his career. Anthony has created and managed key business intelligence tools within the OCFO community that are used to automate reports, dashboards, and visualizations. For 8 years, as a regional branch manager, he led his team in identifying and understanding processes within organizations and helped to optimize those processes for better efficiency and stronger controls.
